COGBILL STRUCTURAL FABRICATION SERVICES

Cogbill Construction has been offering light to medium structural steel fabrication services since 1999, to industrial customers in Texas and Louisiana. These services are performed by skilled professionals with decades of experience to coordinate, design, fabricate and manage projects from start to finish. A hands-on approach ensures that your projects are safely completed on time and at the highest quality possible. We constantly work with our clients to fulfill all their structural fabrication needs.

Our quality management system follows the general guidelines of both AISC and AWS quality requirements. Our welders are certified on AWS D1.1 and ASME Section IX welding standards. Our safety culture ensures projects are completed safely and in compliance with ISNetworld's and Avetta's (formerly PICS) safety and insurance requirements. Contact us today and experience the Cogbill difference.
