THE SYSTEM

THE PROCESS

Put on required PPE, such as safety glasses, gloves, etc.

Abrade bonding surface, painted or unpainted, using emery cloth, sandpaper, etc. Surface should appear scuffed and free of loose debris, to create an anchor profile for the epoxy.

Place RedLineIPS pad on bonding surface (structure, piping, etc.) and mark off the outline of the pad on the surface to be prepped.

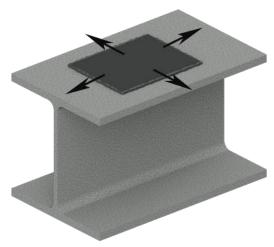

Identify RedLineIPS pad top and bottom (pad will be labeled). The bottom of the pad is the bonding side and is already textured and ready for adhesion.

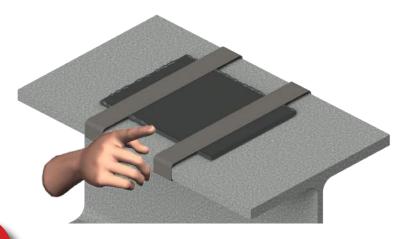

Apply a high-flash solvent (contact cleaner, alcohol) to both the bonding surface and to the pad, then wipe with clean towel.

Squeeze applicator and make it expel and discard 5-6 inches of epoxy, to ensure epoxy in static mixer is thoroughly mixed, until epoxy has a dark grey color.

Carefully but firmly press pad onto the outlined bonding surface. Gently shift pad front to back and side to side about 1/8" to disperse epoxy and expel trapped air.

Using a covered finger, spread excess epoxy along bonding joint perimeter to create a fillet (sealing bead). Inspect bonding joint perimeter to ensure a continuous fillet. Apply additional epoxy as needed.

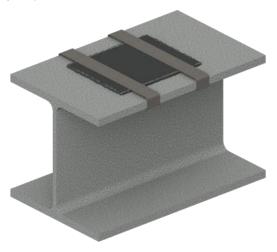

Attach epoxy static mixer to epoxy cartridge, then place cartridge in epoxy applicator.

Apply epoxy to bottom of pad, starting with an outer bead along the entire perimeter, then continue in a zigzag pattern along the length of pad, with epoxy lines spaced roughly 1/2" apart.

Optional: A putty knife or similar can be used to spread epoxy down the center of pad, ensuring a complete layer of epoxy on pad's surface.

Use electrical duct tape, zip ties, ratchet straps, or similar to secure pad in place.

Base Material Temperature		Gel Time	Cure Time
°F	°C	(mins.)	(hrs.)
50	10	75	72
60	16	60	48
70	21	45	24
90	32	35	24
110	43	20	24

12

Keep pad secured in place for a recommended 24 hours. Epoxy set time will be determined by ambient temperature and other factors, please contact for further details. Above is a general recommendation.
